

## Diagram Set Up for non Club Car Charger

Your Club Car has an on-board computer for the single purpose of turning on or off your Club Car charger. When the batteries are fully charged this computer tells the Club Car charger to remain off. Or when the batteries are in need of charging this same computer tells the Club Car charger to turn on.

With the purchase of your 12-month warranted charger this on-board computer is no longer needed. Our chargers are fully automatic. The microprocessor within the charger senses the voltage level of your Club Cars' batteries and turns on or off automatically. The procedure to bypass your Club Car's computer is simple and will take very little of your time. By bypassing your Club Car's computer you are avoiding the future expense of purchasing a new computer just to charge your batteries. The diagram above gives a detailed visual of your Club Car's setup and the only wiring needed to bypass your on-board computer.

### **Follow the directions below and you will be ready to use the best charger on the market:**

1. The negative line coming from the back of your charger-handle receptacle
2. The wire that you must install to bypass your computer.

You need only to splice into #1 with #2, no need to cut the line. Then connect the other end to the negative of the rear most battery; furthest back on the driver's side (Same as shown above). Now your Club Car is ready to work with your new fully automatic charger.
